DISCHARGE LAMP AND METHOD OF FORMING
SAME

ABSTRACT OF THE DISCLOSURE

[00033] An arc lamp includes a light transmissive body having a first end and a second end. A first lead assembly is disposed along the first end and a second lead assembly is disposed along the second end. A first surface of rotation is formed on the first end and a second surface of rotation is formed on the second end that is different from the first surface of rotation. At least one of the first surface of rotation and the second surface of rotation is formed by pinching the body at a respective one of the first and second ends. A method of forming is also included.
